Projects

Online Trip Management System 🔗

Created an Online Trip Management System.

- **Tech Stack:** Spring Boot, Data JPA, Lombok, Hibernate, MySQL.
- **Features:** This will have 2 users, an Admin for resource management and a Customer to access the services of the trip management system. The user will be able to select the travel package in which they can select the Route of travel, Number of tickets, hotels, and many more services including registering themselves as a new customer.
- **Areas of Responsibility:** Worked on the Travel and Package management part of the project. Created Services for Package and Travel, DAO Interface, and Rest Controller. Tested all APIs on Swagger.

ASOS (E-Commerce Website Clone) 🔗

Cloned an E-Commerce named ASOS.

- **Tech Stack:** HTML, CSS, Vanilla Script, Product API.
- **Features:** The user can log in and sign up and add products from the collection and can do payments for the product.
- **Areas of Responsibility:** Worked as a Front End Developer, Created Home page and clothing sections along with Cart and Checkout page. Conducted meetings on daily basis to monitor the progress. Merged all the modules, once they were fully completed and tested.

ANTHROPOLOGIE (E-Commerce Website Clone) 🔗

Cloned an E-commerce website named ANTHROPOLOGIE.

- **Tech Stack:** HTML, CSS, Vanilla Script
- **Features:** Users can log in and sign up and add products from the collection and can do payments for the product.
- **Areas of Responsibility:** Worked as a Front End Developer, Created Home page and clothing sections along with Cart and Checkout page. Conducted meetings on daily basis to monitor the progress. Merged all the modules, once they were fully completed and tested.
